

Growzyme

The plant aid for more efficient plant growth

With Growzyme:

GROWZYME is a liquid brown-algae extract from the seaweed *Ascophyllum nodosum*, which is harvested in the Atlantic Ocean along the north coast using an innovative, high-quality and gentle cold-pressing process.

We place great importance on seaweed of the best quality, because it is particularly rich in amino acids, minerals, trace elements, vitamins and other nutrients that are not present in this variety in terrestrial plants. Our seaweed is sourced only from the unpolluted northern part of the Atlantic and is harvested at the most nutrient-rich stage of the plant-growth cycle.

Growzyme offers many advantages:

- applied directly to the leaves, the plants already look much more vital on the next day, regularly applied more bushy
- increases and stabilizes chlorophyll in plants, resulting in dark-green leaves and increased sugar content
- promotes the growth of microorganisms in the soil that can bind nitrogen from the air
- increases the absorption of nutrients and minerals from the soil into the plant
- increases flowering and the size of blooms and fruits

further advantages of Growzyme:

- improves seed germination and promotes root development
- produces powerful plants with greater resistance to diseases
- increases the shelf life of fruit by slowing protein loss

Growzyme is available in the following sizes:

- 250ml bottle
- 500ml bottle
- 1 l bottle
- 5 l canister
- 10 l canister

Application:

Growzyme should be applied with each watering throughout the growing cycle as follows:

From seed germination / with fresh cuttings:

- 5 ml per 1 liter of water
- The seedlings should be watered once, together with our products HUMIN SAURE PLUS, LIVING ORGANICS and MORE ROOTS; cuttings should also be sprayed using the same dosage.

As a spray solution during the entire vegetative phase, up to the fruit set:

- 3 ml per 1 liter of water

Growzyme is ideally additionally sprayed daily together with 5ml / 1 L HUMIC ACID PLUS, 2ml / 1 L MORE ROOTS and, as needed, with 1ml ORGANIC MORE PK. Spray the plants dripping wet half an hour before sunrise / beginning of illumination, and again in the evening hours. Plants sprayed with Growzyme for the first time can absorb the valuable vitamins, ingredients and nutrients directly through the leaves and thus already look much more vigorous the next day.

All other life stages:

- 2-5 ml per 1 liter of water

Water the plants regularly with Growzyme as well as with all other products of the respective week according to the feeding charts.

As a flavour enhancer after the rinsing process with Clean Fruits:

- 5 ml per 1 liter of water

continue to use regularly until harvest. Find further information in our extended product information, feeding chart or under our website
