

Organic Bloom Liquid

N-P-K fertilizer for a successful flowering phase

With Organic Bloom Liquid, fructification sites grow to become powerful buds thanks to the pre-soluted formula. 50% of the nutrients are available to the plants immediately while the other 50% feed the microflora and become available to the plants after 7-10 days, depending on the growing media and the microorganisms within.

The well-selected, high-quality ingredients will give you a true connoisseur taste experience that you have not known before.

Note:

An optimum pH-level of the nutrient solution (5.8-6.5) guarantees constant availability of all nutrients required in the flowering phase.

Organic Bloom Liquid is available in the following sizes:

- 250ml bottle
- 500ml bottle
- 1 l bottle
- 5 l canister
- 10 l canister

Application

Shake well before every use! (when not in use, shake every 2 weeks)

A thin layer can be visible at the bottom and is easily dissolved by shaking. This is no loss of quality. It comes from the high concentration of organic nutrients.

For watering as a nutrient solution:

• For soil and coco:

2-5ml per 1 liter of water (in soil, apply with every second watering)

• Auf allen anderen Medien:

3-5ml per 1 liter of water

Please always observe the following after each fertilization:

When leaves turn a dark green color, reduce amount of fertilizer by 30%.

If leaves turn a lighter green, increase fertilizer until leaves regain their normal color, and continue with that amount of fertilizer.
