

pH- Powder

6.4 - 6.3 - 6.2 - 6.1 - 6.0 - 5.9

Organic pH-correction powder

Out of respect for mother nature:
organic pH correction in powder form

With pH- Powder:

- pH-level is corrected quickly
- plants are provided with extra nutrients such as nitrogen, phosphorus, magnesia, sulfur and high-quality silicates
- nutrient lockout is prevented

More advantages of pH- Powder:

- applied regularly, it prevents signs of nutrient deficiency before they occur
- easy to use – can be fed at the same dosage during the entire life cycle
- it is 100% organically obtained and makes the use of hazardous acids unnecessary
- not harmful, because it is in powder form

To clean the system and the substrate, mix approx. 1 g per 5 liter of water for flushing, and let run for several hours.

pH-powder is available in the following sizes:

- 100g zip bag
- 250g bucket
- 1,000g bucket
- 5,000g bucket
- 10,000g bucket

Application:

Recommendations of official advisory centers have precedence.

This information serves as a benchmark only, as starting pH-levels vary a lot depending on your region.

1. Mix all nutrients, then measure the pH-level.
2. 1 teaspoon to maximum 1 tablespoon (about 1-2 grams) are enough for 5-10 liters of nutrient solution. Stir well before measuring pH-level again.
3. The nutrient solution should now lie between 5.8 and 6.5.
4. If necessary, more powder or more water can be added.
